PROPOSED SOLUTION

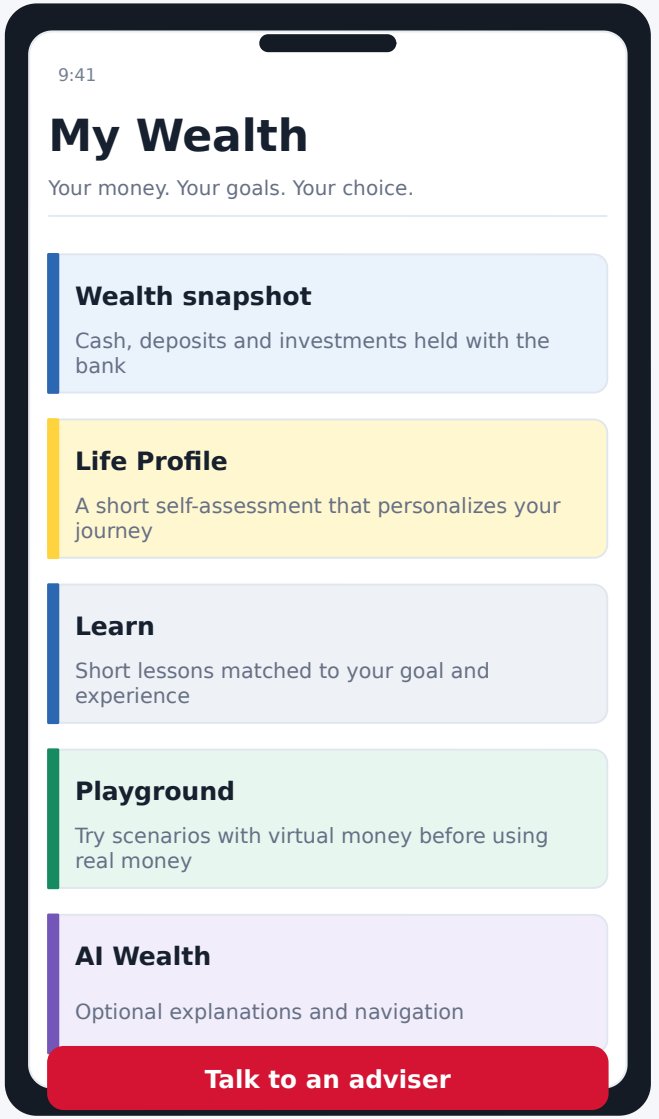

My Wealth

A personalized wealth-guidance layer inside the existing mobile app for mass-affluent customers.

Core promise

Self-service when I want independence. Human expertise when I need confidence.

Concept for team discussion - built from current expert evidence, not a final product decision.

WHY THIS CONCEPT

The opportunity is between basic self-service and full advisory

Two expert interviews point to a gap in access and orchestration - not a lack of products or adviser tools.

WHAT WE HEARD

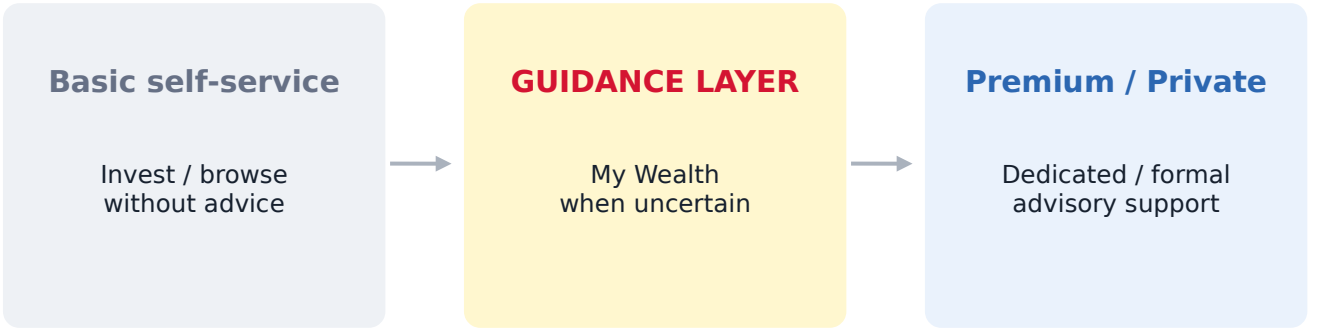

HUNGARY

Mass-affluent customers were described as non-advisory, while Premium / Private customers can access human advice.

SERBIA

Advised customers can receive personalized guidance through a banker, video meeting and advisory tool. The bank already knows how to identify eligible customers.

DESIGN OPPORTUNITY

MY WEALTH = scalable guidance before full advisory

Evidence note: interview summaries were AI-generated and still require verification; this deck uses them as expert signals, not customer proof.

STEP 1 - UNLOCK

Invite the customer into My Wealth when eligibility rules are met

Use bank-defined signals. The experience should feel like added value - not a sales alarm.

ELIGIBILITY SIGNALS

I **Income**

salary / inflow

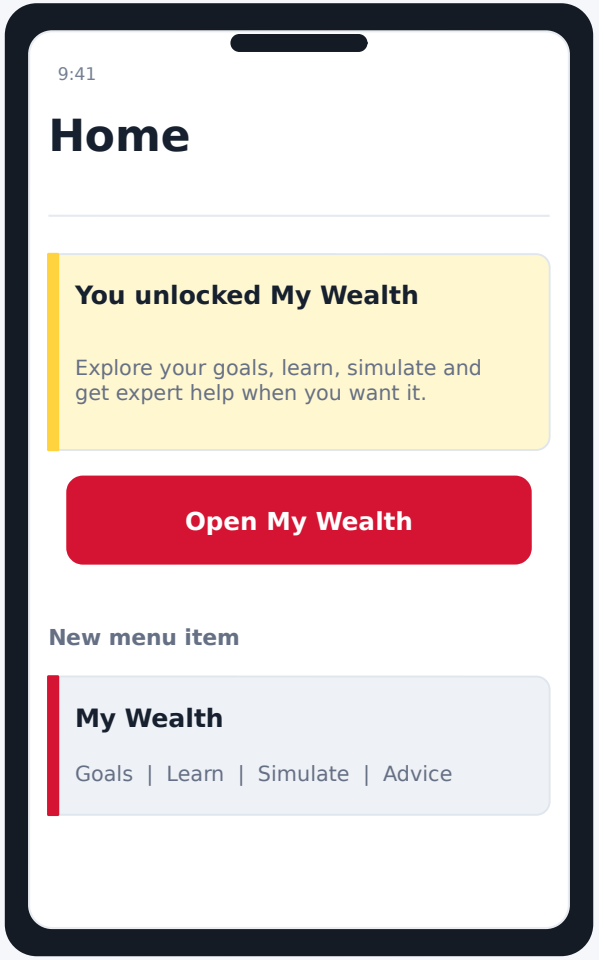

A **Assets**

deposits + investments

R **Relationship**

bank-defined segment rules

THRESHOLD MET →

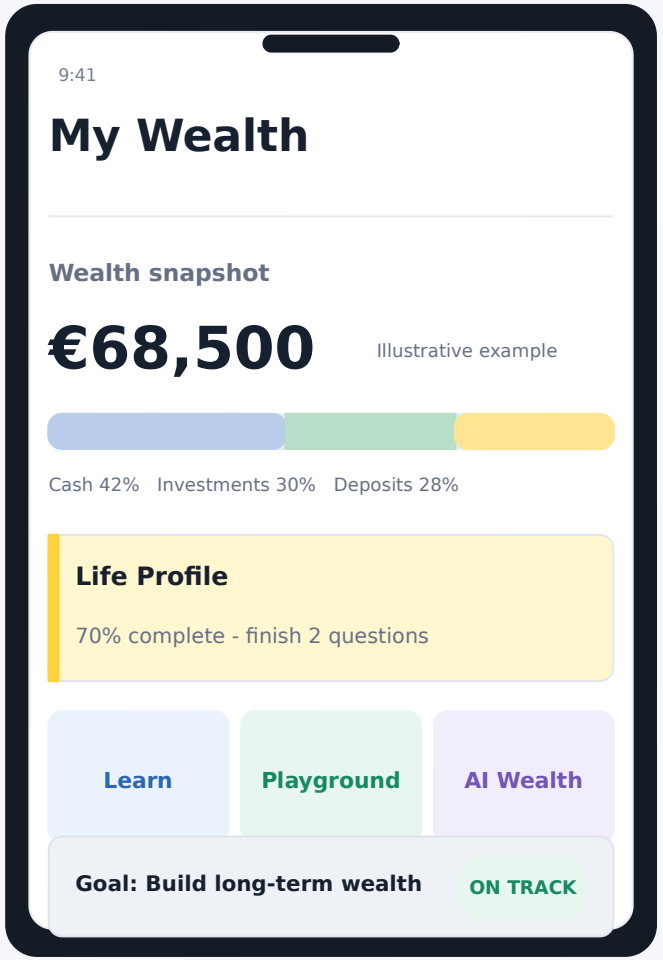

Design principle

Do not say: “You have money - invest it.”
Say: “You have unlocked tools to understand your options and choose what is right for you.”

STEP 2 - HOME

My Wealth becomes the customer’s wealth home

One place to understand the current picture, goals and next best actions.

WHAT THE CUSTOMER SEES

- A simple view of money held with the bank.
- Goals and progress - not just a list of products.
- Personalized next steps based on the Life Profile.
- Three paths: learn, explore alone, or ask for help.

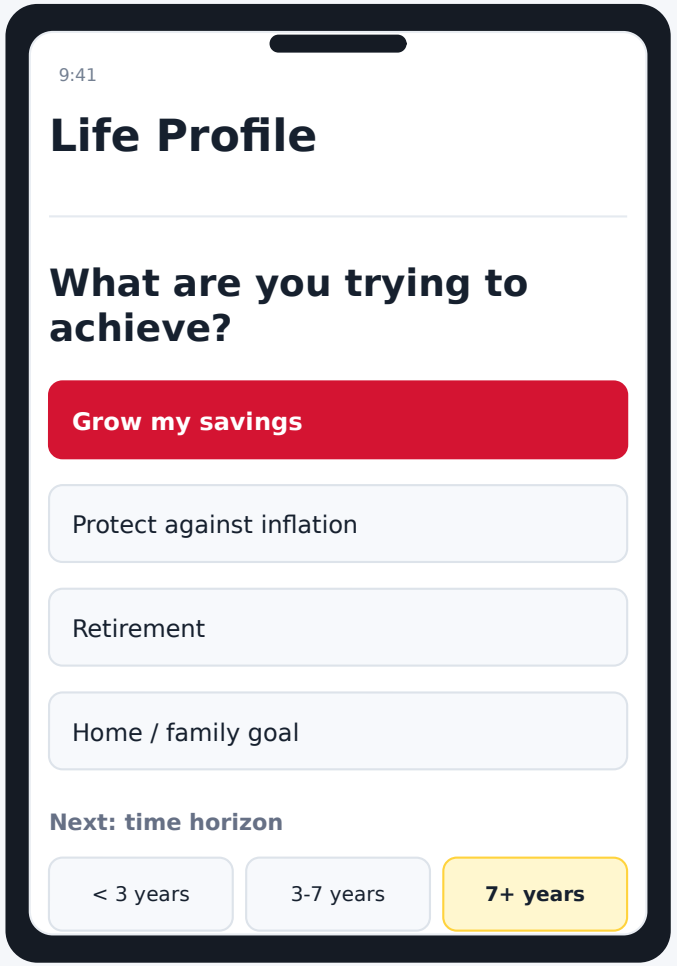

Why it matters

Start with “What are you trying to achieve?” - not “Which fund do you want to buy?”

STEP 3 - PROFILE

Life Profile = guided self-assessment

It personalizes education and navigation before the customer is asked to choose a product.

QUESTIONS INSIDE THE ASSESSMENT

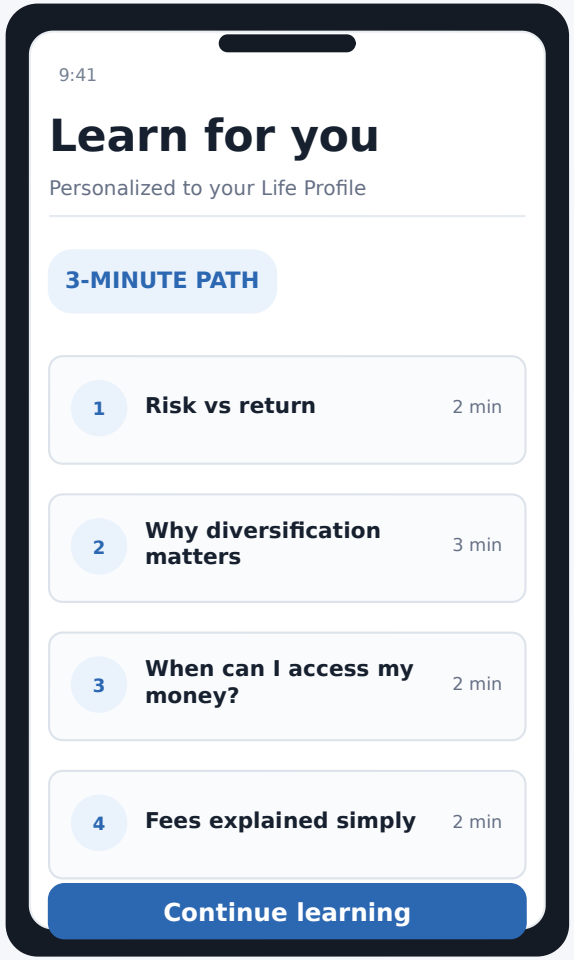

Goal	What is this money for?
Time	When might you need it?
Risk comfort	How would you react to a temporary loss?
Liquidity	How important is quick access?
Experience	How familiar are you with investing?
Support	Do you prefer self-service, AI help, or a person?

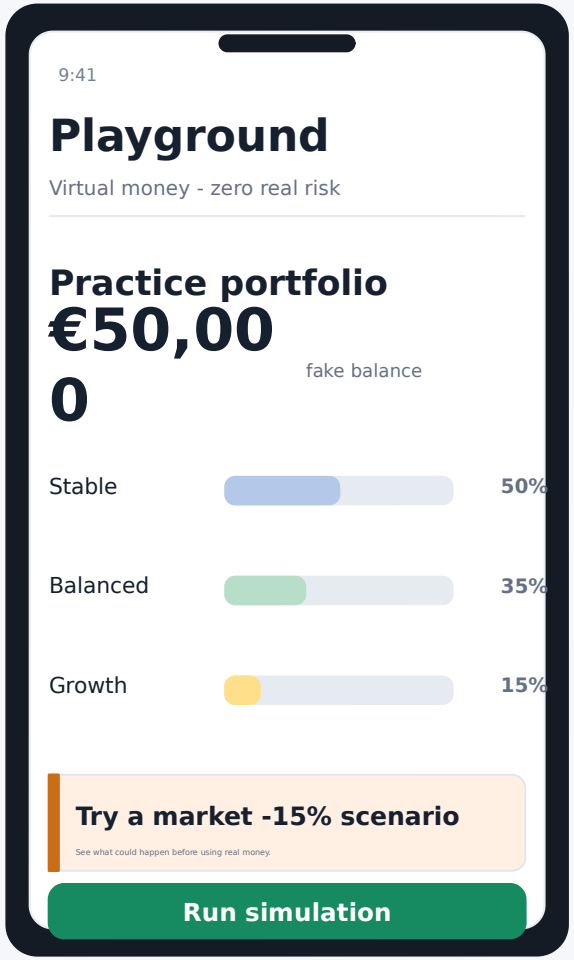

Important: Life Profile personalizes the journey. Formal MiFID / suitability checks stay in the approved advisory process.

STEP 4 - BUILD CONFIDENCE

Learn and Playground reduce fear before real money is at risk

Different customers can build confidence in different ways - without forcing AI.

WHY BOTH

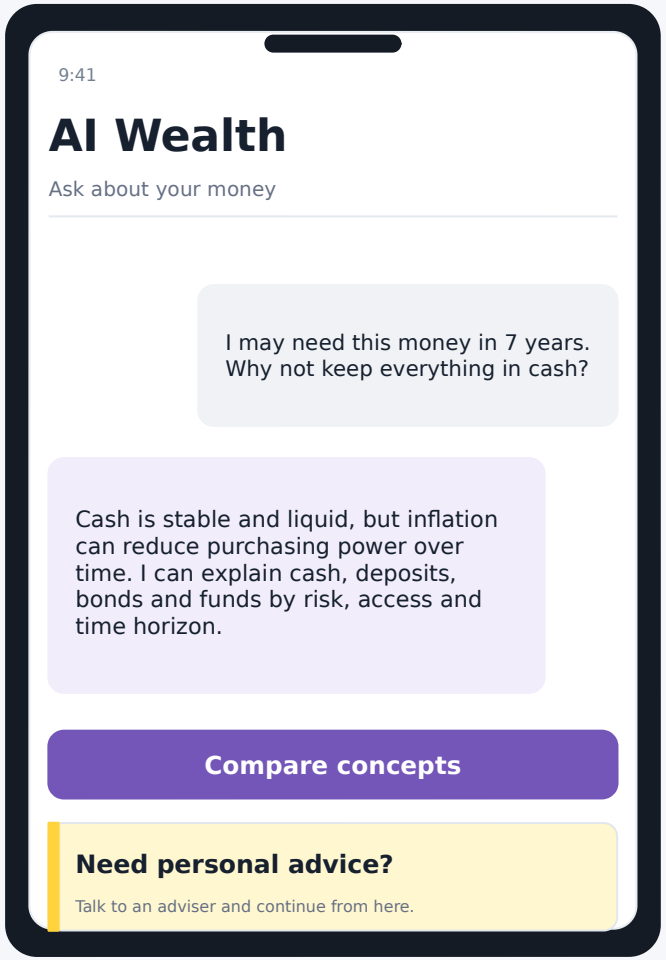

- Some customers want explanations first.
- Some learn better by trying things themselves.
- No customer needs to use AI to benefit.
- Both paths can end in a human conversation.

Learn -> practice -> understand -> decide

STEP 5 - OPTIONAL AI

AI Wealth is an explanation layer, not the whole product

It helps customers understand and navigate; regulated personal advice remains in the approved advisory process.

WHAT AI WEALTH CAN DO

Explain	products, risk, fees and terminology
Personalize	education using the Life Profile
Navigate	help find the right next step
Prepare	collect questions before a human meeting

GUARDRAILS

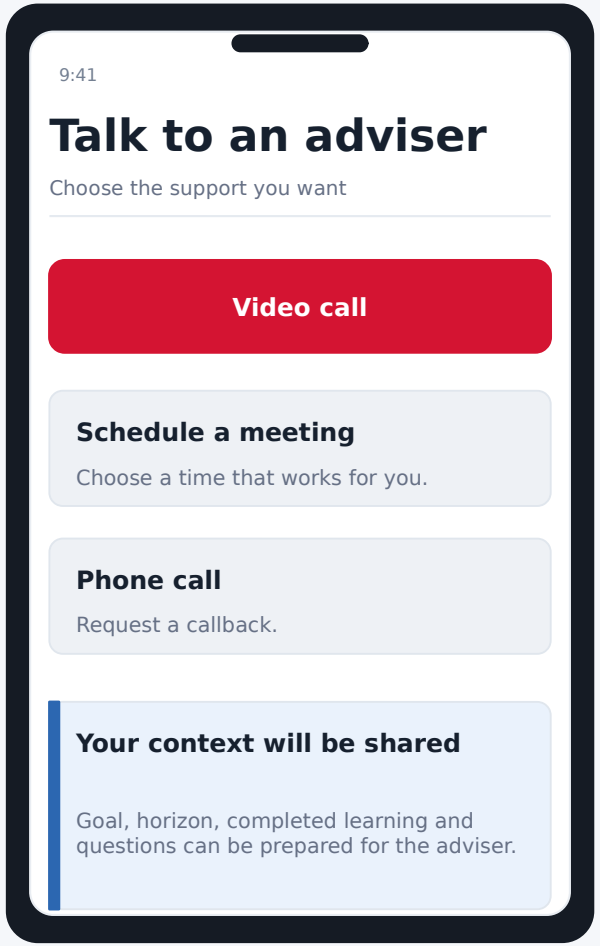

- No autonomous execution.
- No personal recommendation outside approved advisory rules.
- Clear source / product information.
- One tap to a human when needed.

Key point: AI is a choice. Human-first customers can skip it completely.

STEP 6 - HUMAN SUPPORT

Smart handover connects digital exploration to a real adviser

The customer should not repeat the story. The adviser should start with context.

ADVISER RECEIVES A SHORT PREP

CUSTOMER CONTEXT

Goal	Grow long-term savings
Horizon	7+ years
Experience	Beginner
Completed	Risk basics + diversification
Main question	**What happens if markets fall?**

Then the existing advisory / MiFID process takes over for any regulated recommendation or transaction.

STEP 7 - STAY RELEVANT

Engagement continues after the first visit

Use life and money moments - not constant sales calls - to bring customers back to My Wealth.

TRIGGER

Deposit matures

Review your options before renewal.

TRIGGER

Salary / bonus grows

Would you like to update your goals?

TRIGGER

Goal review due

Your Life Profile is 12 months old.

TRIGGER

Market uncertainty

Understand what changed before acting.

Every nudge offers a choice: Explore myself | Ask AI | Talk to a human | Ignore for now

The relationship stays useful and customer-controlled rather than campaign-driven.

END-TO-END

One platform, multiple ways to engage

The customer can choose self-service, optional AI, or human support depending on confidence and preference.

SAME PLATFORM, DIFFERENT CUSTOMER PREFERENCES

DIGITAL-FIRST CUSTOMER

Life Profile -> Learn -> Playground -> AI Wealth -> Adviser only if needed

HUMAN-FIRST CUSTOMER

Life Profile -> Learn -> Talk to adviser -> existing advisory process

Customer	More confidence and control
Bank	Deeper engagement and relationship
Adviser	Better prepared conversations
Compliance	Formal advice stays in approved process

PROTOTYPE NEXT

Test the riskiest assumptions before building the whole concept

Tomorrow’s prototype should answer whether customers actually value the unlock, profile and support choices.

A	**Unlock moment**	Does the notification feel valuable - or sales-driven?
B	**Life Profile**	Will customers complete a short self-assessment for better guidance?
C	**Support choice**	Do they prefer self-service, AI, or a human at different moments?
D	**Smart handover**	Does sharing context make customers more willing to speak with an adviser?

Prototype just 4 mobile screens: Unlock -> My Wealth Home -> Life Profile -> Choose support

If customers do not value the core journey, there is no reason to build AI, simulations or advanced personalization yet.
