PROPOSED SOLUTION

My Wealth

A personalized wealth journey for mass-affluent customers - inside the existing mobile app.

Self-service when I want independence.
Human expertise when I need confidence.

Concept prototype for team discussion

Why this concept?

Two expert interviews point to a gap between basic self-service and full Premium / Private advice.

WHAT WE HEARD

HUNGARY

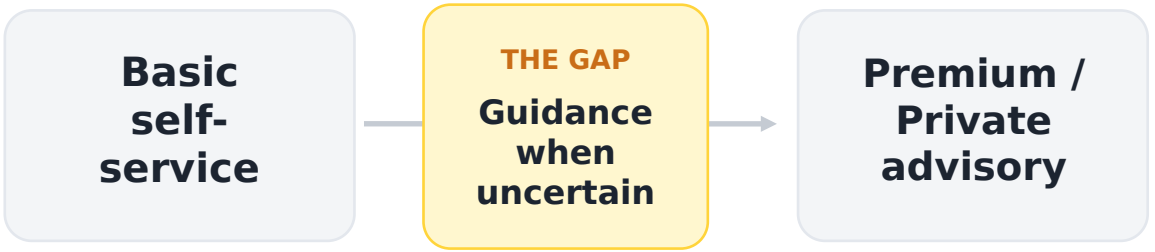

Mass-affluent customers were described as mainly non-advisory, while digital investing already exists and Premium / Private customers can access human advice.

SERBIA

Advised / Premium customers can receive personalized guidance through a banker, video meeting and an advisory tool. The bank can already identify eligible customers.

DESIGN OPPORTUNITY

TODAY

PROPOSAL

MY WEALTH - a scalable guidance layer inside mobile banking

Evidence note: based on two internal expert interviews. Meeting notes were AI-generated summaries and still require verification.

1. Unlock My Wealth when the customer becomes eligible

Use existing bank signals to invite the customer into a richer guidance experience - without forcing Premium.

ELIGIBILITY SIGNALS

I **Income**
salary / inflow

A **Assets**
deposits + investments

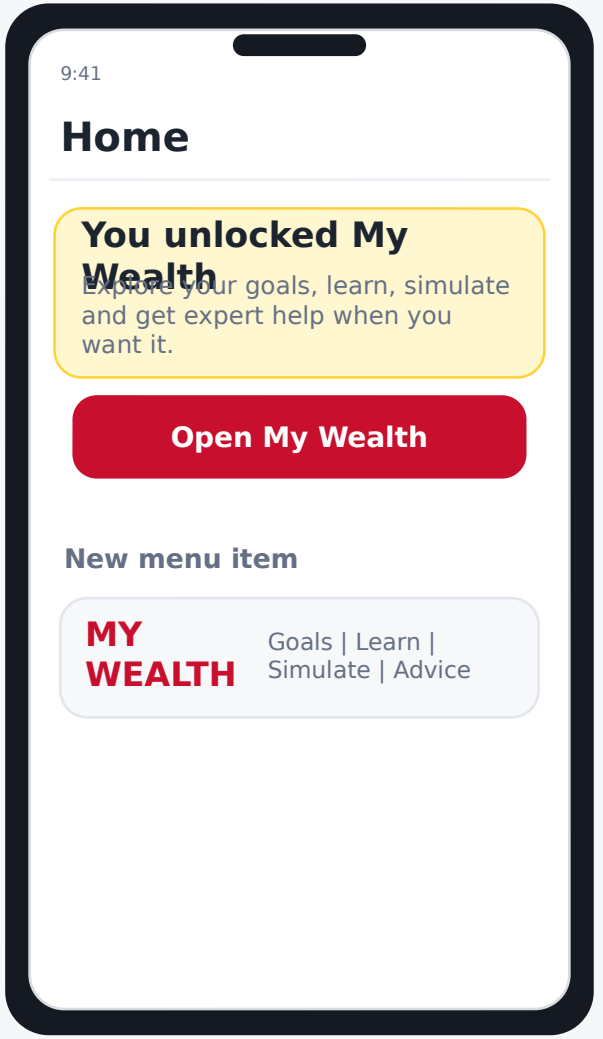

R **Relationship**
bank-defined segment rules

THRESHOLD MET

Important design principle

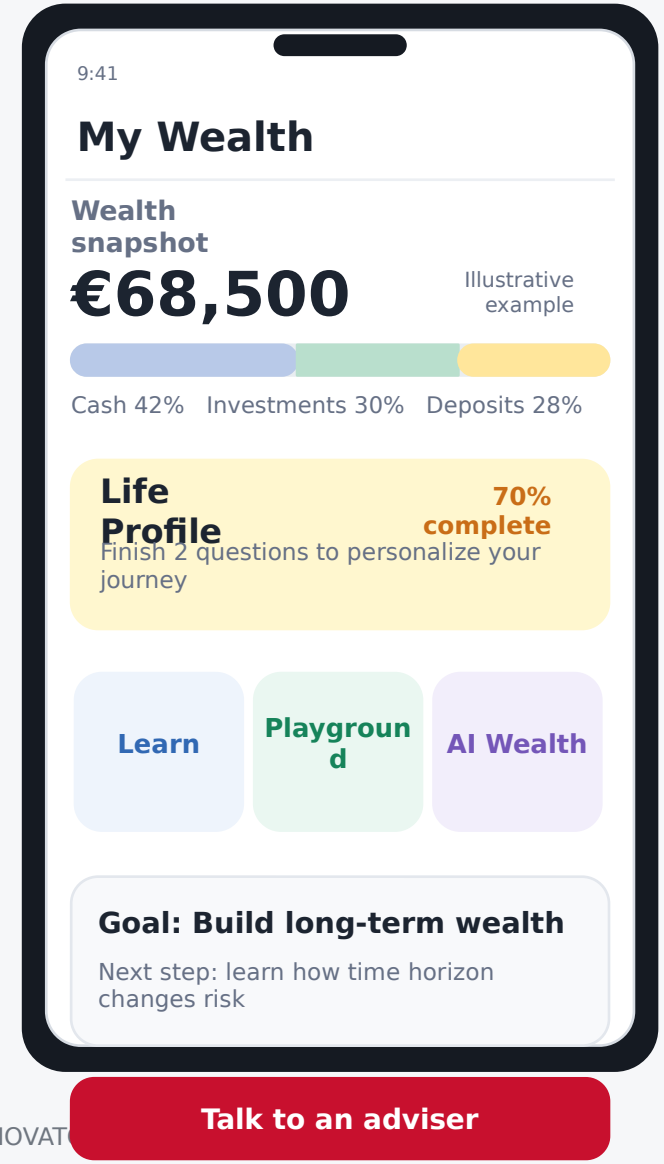

The message is not “you have money, invest it.” It is an invitation to understand options and decide what is right for the customer.

Customer value first

2. My Wealth becomes the customer's wealth home

One place to understand the financial picture, goals and next best actions.

WHAT THE CUSTOMER SEES

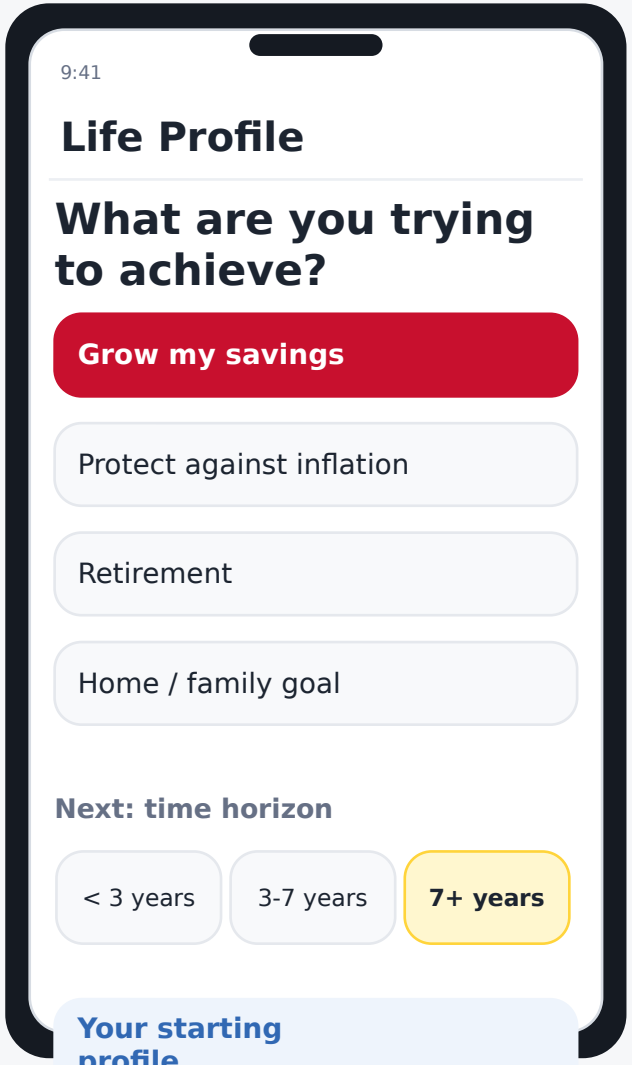

- A simple view of money held with the bank.
- Goals and progress, not just a list of products.
- Personalized next steps based on the Life Profile.
- Three paths always visible: learn, explore alone, or ask for help.

Why it matters

The experience starts with “What are you trying to achieve?” - not “Which fund do you want to buy?”

3. Life Profile = guided self-assessment

Personalize the journey before asking the customer to choose an investment product.

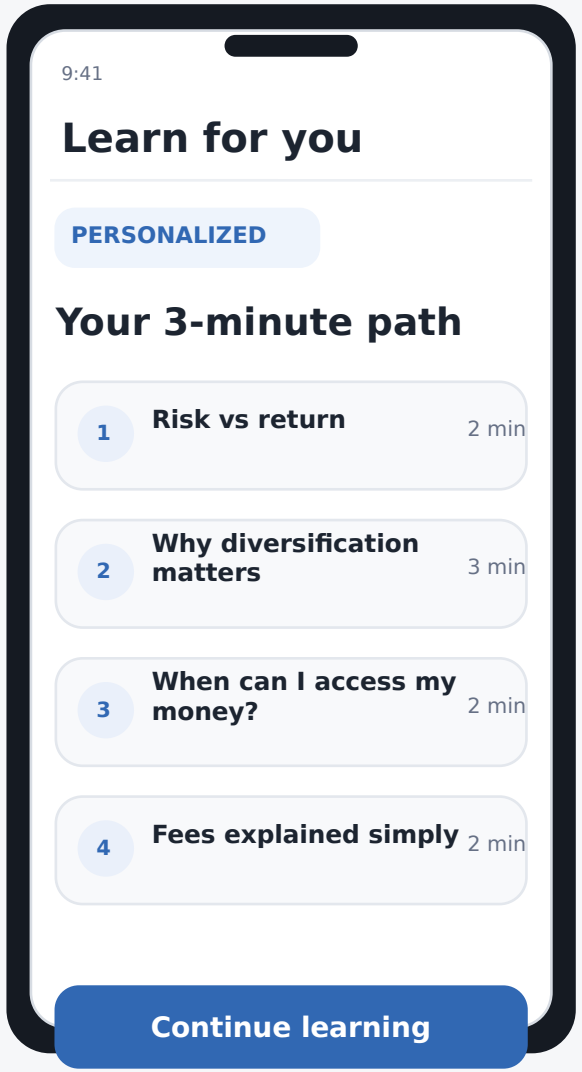

QUESTIONS INSIDE THE ASSESSMENT

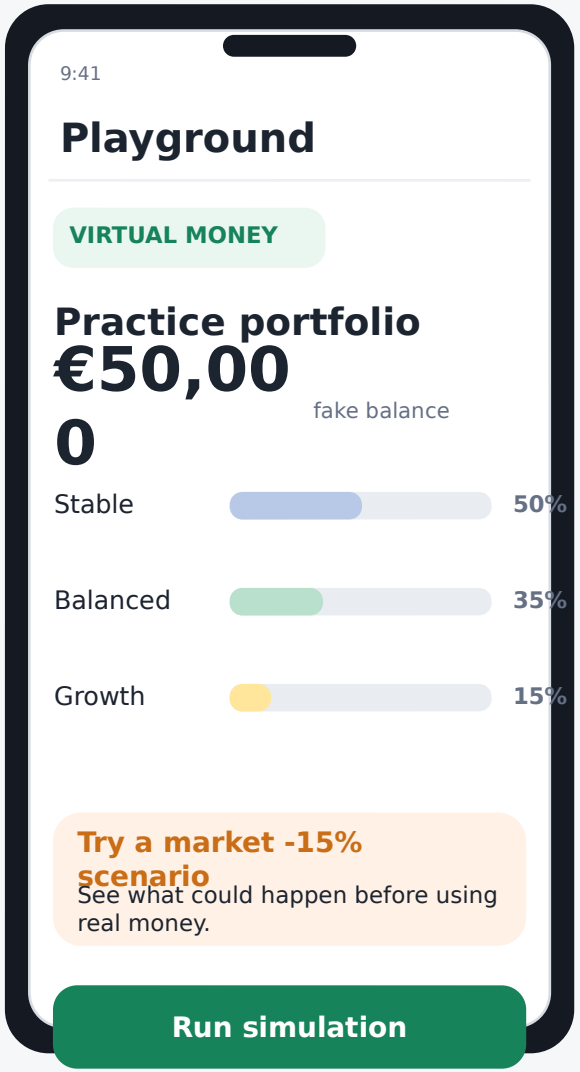

Goal	What is this money for?
Time	When might you need it?
Risk comfort	How would you react to a temporary loss?
Liquidity	How important is quick access?
Experience	How familiar are you with investing?
Support	Do you prefer self-service, AI help, or a person?

Important: Life Profile personalizes education and navigation. Formal MiFID / suitability checks remain in the approved investment or advisory process.

4. Learn and Playground reduce fear before real money is at risk

Different customers can build confidence in different ways.

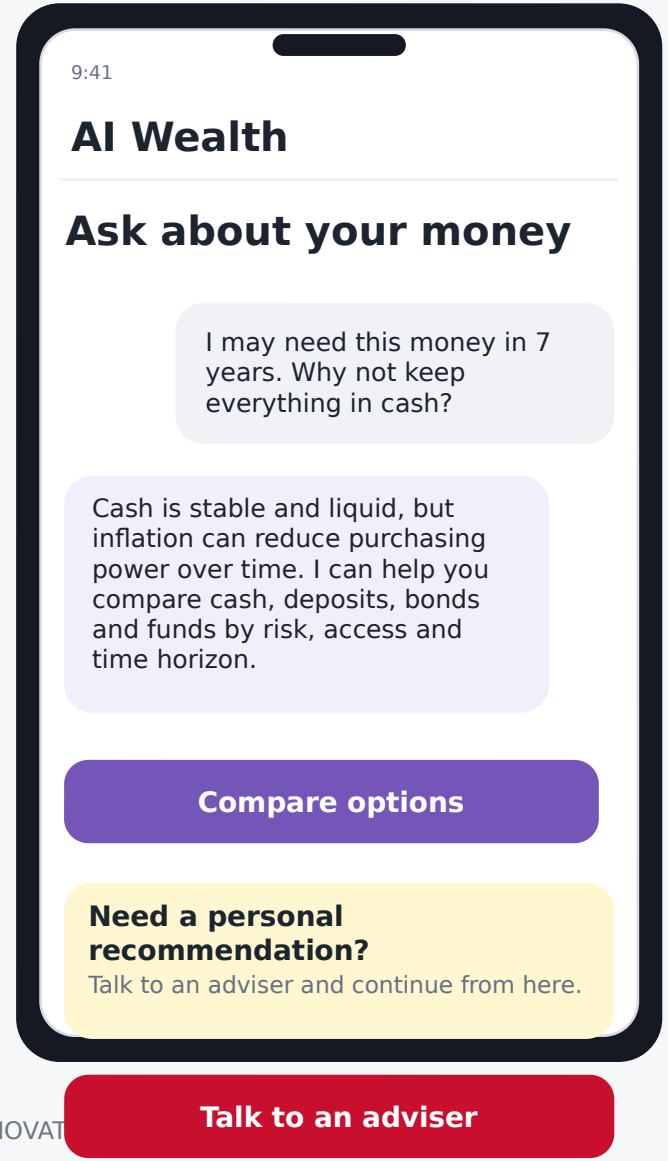

WHY BOTH

- Some customers want explanations first.
- Some learn better by trying things themselves.
- No customer needs to use AI to benefit.
- Both paths can end in a human conversation when confidence is still low.

Core idea **Learn -> practice -> understand -> decide.**

5. AI Wealth is optional - an explanation layer, not the whole product

Use profile + approved bank content to answer questions, then escalate when personal advice is needed.

WHAT AI WEALTH CAN DO

Explain	products, risk, fees and terminology
Personalize	education using the Life Profile
Navigate	help find the right next step in My Wealth
Prepare	collect questions before a human meeting

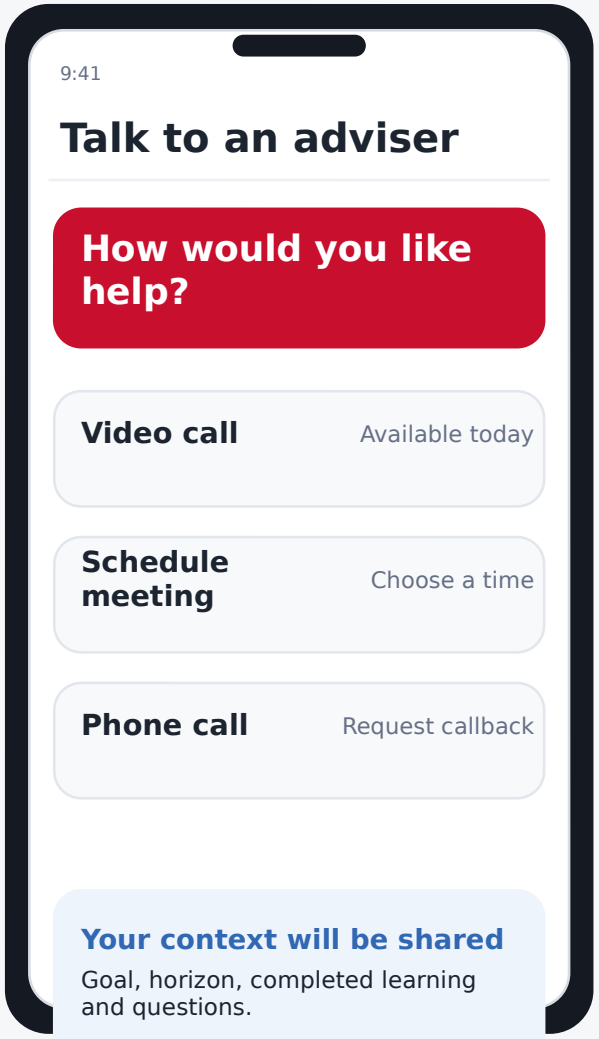

GUARDRAILS

- No autonomous execution.
- No personal recommendation outside approved advisory rules.
- Clear source / product information.
- One tap to a human when needed.

Key point: AI is a choice. Human-first customers can skip it completely.

6. Smart handover connects digital exploration to a real adviser

The adviser gets context, the customer does not repeat the story, and the existing advisory process can continue.

ADVISER RECEIVES A SHORT PRE-MEETING SUMMARY

CUSTOMER CONTEXT

Goal	Grow long-term savings
Horizon	7+ years
Experience	Beginner
Completed	Risk basics, diversification
Main question	**What happens if markets fall?**

Then the existing advisory / MiFID process takes over for any regulated recommendation or transaction.

7. Engagement continues after the first visit

Use relevant life and money moments - not constant sales calls - to bring customers back to My Wealth.

TRIGGER

Deposit matures

“Review your options before renewal.”

TRIGGER

Salary / bonus grows

“Would you like to update your goals?”

TRIGGER

Goal review due

“Your Life Profile is 12 months old.”

TRIGGER

Market uncertainty

“Understand what changed before acting.”

Every nudge offers a choice: Explore myself | Ask AI | Talk to a human | Ignore for now

This keeps the relationship useful and customer-controlled rather than campaign-driven.

Proposed end-to-end solution

One platform, multiple ways to engage - depending on confidence and preference.

1 → **Detect**
Customer enters mass-affluent segment

2 → **Unlock**
My Wealth appears in the app

3 → **Profile**
Goals, horizon, risk comfort

4 → **Build confidence**
Learn + Playground

5 → **Choose support**
Self-service / AI / human adviser

6 → **Act & review**
Existing investment process + check-ins

SAME PLATFORM, DIFFERENT CUSTOMER PREFERENCES

Digital-first customer
Life Profile -> Learn -> Playground -> AI Wealth -> Adviser only if needed

Human-first customer
Life Profile -> Learn -> Talk to adviser -> existing advisory process

Customer	**More confidence and control**
Bank	**Deeper engagement and relationship**
Adviser	**Better prepared conversations**
Compliance	**Formal advice stays in approved process**

What should we prototype tomorrow?

Test the riskiest assumptions before building the whole concept.

A	**Unlock moment**	Does the notification feel valuable - or creepy / sales-driven?
B	**Life Profile**	Will customers complete a short self-assessment to get better guidance?
C	**Support choice**	Do they prefer self-service, AI, or a human at different moments?
D	**Smart handover**	Does sharing context make customers more willing to speak with an adviser?

Prototype just 4 mobile screens: Unlock -> My Wealth Home -> Life Profile -> Choose support
